

2026 Clinical & Translational Research Experience (CT-REx) Research Symposium

Friday, July 24, 2026

10:00 AM – 12:00 PM (In Person)

Domenici Center North Wing (DCNW), Room 3760

CTSC's Clinical and Translational Research Experience (CT-REx) is a career-preparation program that provides an intensive 8-week training focused on building core clinical research skills. Throughout the eight-week program, students have been immersed in clinical and translational research while shadowing research teams across a variety of disciplines. Their posters will highlight what they learned during the program, with a special emphasis on their experiences in the research laboratories and clinical research settings where they spent the summer.

We are proud to celebrate the completion of our third cohort, featuring 10 outstanding undergraduate students—six from New Mexico and four from Arizona.

Please join us in person to celebrate the work of our 2026 Summer Cohort .

Your support and engagement will mean a great deal to our students as they reflect on their summer and share their accomplishments.

Please contact Dr. Annette Crisanti at ACrisanti@salud.unm.edu for additional information.
